

LEG BRACE RAIL KITS

Benches can be assembled without an undershelf to allow for extra room below. Fit a dishwasher, fridge or create an island bench for your customers to sit at.

The leg brace rail kit must be fitted when removing an undershelf, to maintain the structural integrity of your Brayco Stainless Steel Bench.

The leg brace is fully height adjustable and can be configured into either option below;

Option 1

Perfect for an island bench, creating handy footrest.

Option 2

Perfect when wanting to fit a fridge (shown below), dishwasher or other storage options underneath.

Option 3

Your choice. The options are endless!

How to install a leg brace rail kit to a bench

See our YouTube Channel @BraycoAustralia for assembly videos.

1. Place leg brace rail kit components on the floor and push the parts together, then use grub screws supplied in the pack to secure the rail kit component. 4 legs and 6 legs configurations are shown below.
2. With your bench upside-down, slide the assembled leg brace rail kit over the bench legs to your desired height, and screw in place*. You will need 2 people to complete this step.

*When not using the front rail, we recommend you fit it to the back for extra stability.

Rail Attachment Configuration:

- 3 Way Attachment
- Corner
- Straight

Bench with 4 legs

Bench with 6 legs

Extra configurations available, contact us for more information!
